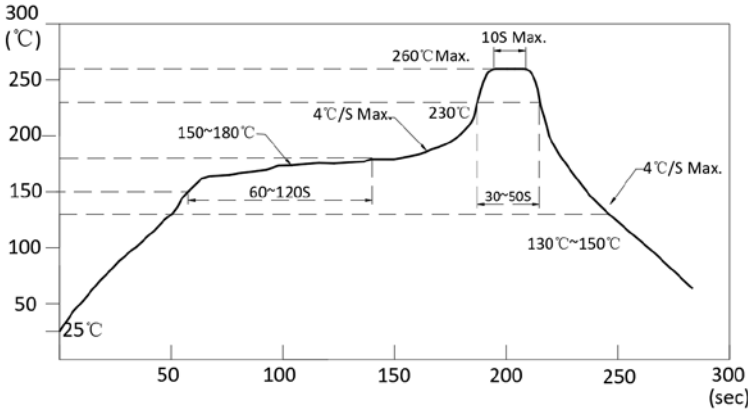
Reflow Profile

■ Reflow Temp/Time



Notes:

1. We recommend the reflow temperature 245℃(±5℃).The maximum solderingtemperature should be limited to 260℃.

2.Don't cause stress to the epoxy resin while it is exposed to high temperature.

3.Number of reflow process shall be 2 times or less.

■Soldering iron

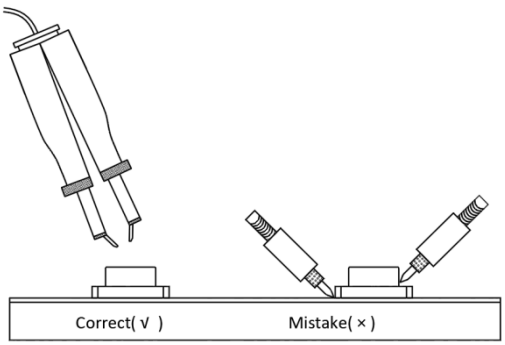
Basic spec is ≤ 5sec when 320℃(±20℃). If temperature is higher, time should be shorter(+10℃→ -1sec). Powerdissipation of iron should be smaller than 20W, and temperatures should be controllable .Surface temperature of the device should be under 350℃.

■Rework

1.Customer must finish rework within 5 sec under 340℃.

2. The head of iron cannot touch copper foil

3. Twin-head type is preferred.

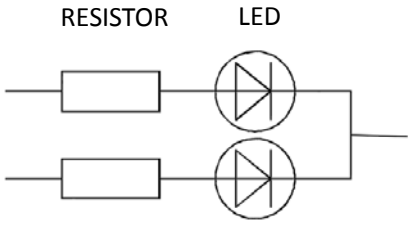


■ Avoid rubbing or scraping the resin by any object, during high temperature, for example reflow solder etc.

Handling precautions

1.Drive Method

A LED is a current-operated device. In order to ensure intensity uniformity on multiple LEDs connected in parallel in anapplication, it is recommended that a current limiting resistor be incorporated in the drive circuit, in series with each LEDas shown in Circuit below.



2. Storage

2.1 Do not open moisture proof bag before the products are ready to use.

2.2 Before opening the package:The LEDs should be kept at 30℃ or less and 60% RH or less.

2.3 After the package is opened, theproducts should be used within a week or theyshould be keeping to storeat 20 RH sealed with zip

3. Baking

It is recommended to baking before soldering when the pack is unsealedafter 72hrs. The Conditions are as followings:

3.1 60±3℃ x(12~24hrs) and ＜5%RH, taped reel type

3.2 100±3℃ x(45min~1hr), bulk type

3.3 130±3℃ x(15~30min), bulk type
